CASE STUDY

Successful product launch through nearshore staff augmentation.

Restore ai

AI-Driven Survivor Recovery Platform

Restore is an AI-powered survivor recovery platform. The company partnered with Ewents to build its product and get paying customers in less than 6 months through nearshore staff augmentation.

OUTCOMES:

- Built an AI-driven web and mobile platform in less than 6 months.
- Scaled development with 3 engineers from Argentina.
- Achieved product-market fit onboarding paying customers.

🌐 Location: Denver, CO, USA

🏛 Industry: Public Sector, Law Enforcement, and Higher Education

The Challenge: Modernizing a Fragmented Advocacy Ecosystem

In 2023, after surviving a random assault, Restore AI's founder was introduced to the victim advocacy space and discovered a fragmented ecosystem of over 12,000 organizations still relying on outdated tools from the 1990s and early 2000s, or platforms never built for advocacy workflows.

To launch its product, Restore AI needed a high quality technology partner. After evaluating 20+ development firms across Asia, Eastern Europe, India, Mexico, and beyond, Ewents stood out as the only team combining strong technical expertise with the culture fit needed to build a category-defining platform.
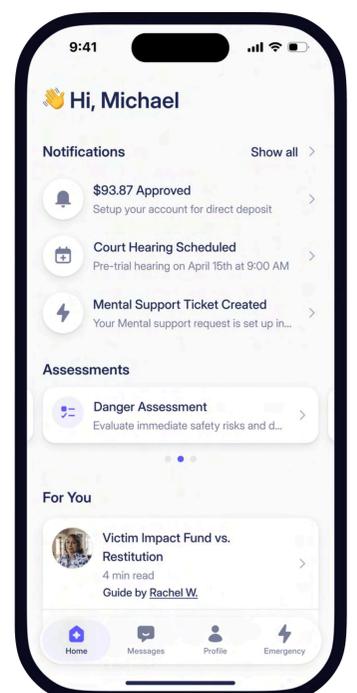

Ewents built the entire product, including a secure multi-tenant backend on AWS, a React web app, and a production-ready React Native mobile app designed for AI-driven workflows.

React / Native   Laravel   TS Typescript   aws Amazon Web Services

"I evaluated cost, time zone, trust, and quality. Ewents stood out because they brought A-plus people, shared our values, and earned our trust from day one." — Jack DeWolf, Founder

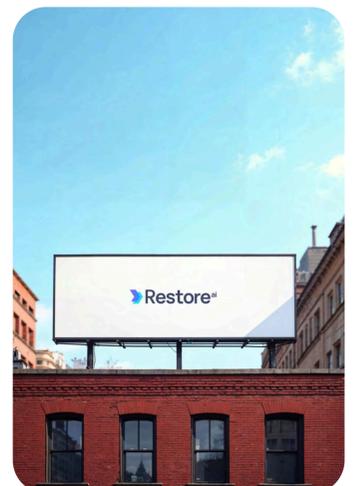

The Outcome: Launching an AI-Ready Platform With Ewents

Restore AI partnered with Ewents for staff augmentation, and successfully:

- Scaled the team quickly with 3 senior engineers from Argentina at a fraction the cost.

- Built a production-ready, AI-driven platform in under six months with 99.9% uptime.

- Collaborated quickly with only a two-hour time difference between Denver and Argentina.

Looking ahead, Restore AI is focused on aggressive growth and category leadership, with continued investment in product, customer success, and long-term partnerships. Ewents remains a core part of that journey, supporting ongoing development as Restore AI scales.

"We went from an idea to a commercialized product with paying customers in less than six months. That's almost unheard of for this type of system." — Jack DeWolf, Founder
